

PLYMAN

GREATER SELECTION • BETTER VALUE

PRODUCT DATA SHEET

Plyman Lite Gold

- **Description:** Produced out of Albasia Falcata in Indonesia. Consists of at least three layers of veneer, these layers are cross-laminated to each other. This leads to a homogenisation of the product what provides a better volume stability and less directional dependency. Being up to 38% lighter than standard hardwood plywood's, Falcata can deliver significant weight savings in an interior fit outs.
- **Specie:** Core: Sengon or Jabon. Decklayer: Segon, Jabom, Noble Veneer
- **Size:** 2440mm x 1220mm
- **Thickness, Construction Typical Weights**
 - 9mm - Average Weight per 1220 x 2440 sheet: approx 9.3 kg per sheet
Average density kg/m³: 350 (approx.)
 - 12mm - Average Weight per 1220 x 2440 sheet: approx 12.5 kg per sheet
Average density kg/m³: 350 (approx.)
 - 18mm - Average Weight per 1220 x 2440 sheet: approx 18.75 kg per sheet
Average density kg/m³: 350 (approx.)
- **Colours:** Falcata is typically of lighter appearance than many traditional hardwood species with a clear face and a subtle grain.
- **Source:** Indonesia.
- **Glue Bond:** Made with an interior moisture proof bond to support longevity in use. Not suitable for structural applications or exterior use.
- **Uses:** Caravan and shop fitouts, ceiling and wall lining, door cores, lightweight furniture.
- **Storage:** Keep dry, store undercover, stack clear of ground.
